### **DETAILED ACTION**

1. Claims 1-38, and 40-42 are presented for examination with claims 1, 14, 15, 22, 24, 33, and 41 independent. The Office acknowledges the cancellation of claim 39.

## Claim Rejections - 35 USC § 102

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1, 2, 4-10, 14-16, 18, 19, 24-30, 33-36, and 41 are rejected under 35 U.S.C. 102(b) as being anticipated by Dureau (WO 99/66726) (cited by Applicant in IDS).

3. Referring to claim 1, Dureau discloses a system for processing interactive media output from one or more subscribers (i.e. receiving stations 13) comprising:

a collection and aggregation network (e.g. abstract) including:

a collector configured to collect the interactive output from each of the one or more subscribers and to store the collected interactive media output in a non-relational manner (e.g. abstract); and

an aggregator operably connected to the collector, the aggregator configured and arranged to collect and aggregate the interactive output from the collector (p. 7, lines 6-19).

Art Unit: 2143

- 4. Referring to claim 2, Dureau discloses the collection and aggregation network is configured to process a high volume of the interactive output (i.e. when the set-top box is full) (p. 7, lines 1-5).
- 5. Referring to claim 4, Dureau discloses the interactive output is processed by the collector and aggregator network so that it is transmitted through the system in real time (i.e. the set-top box collects interactive data as it occurs) (p. 6, lines 25-26).
- 6. Referring to claim 5, Dureau discloses at least one communications message server, operably connected to a plurality of the one or more subscribers and the collector, that receives the interactive output from said subscribers and formats the output for transmission to the collector (the set-top box receives the interactive output from the user where it is transmitted to the broadcast station) (e.g. abstract; p. 7, lines 1-5).
- 7. Referring to claim 6, Dureau discloses the collector includes a plurality of products, each of the products processing the interactive output corresponding to an event (i.e. creating viewer preference filters based on the incoming data) (p. 7, lines 6-24).
- 8. Referring to claim 7, Dureau discloses the products log at least a portion of the interactive output from the event (p. 7, lines 19-36).

Application/Control Number: 09/825,409 Page 4

Art Unit: 2143

9. Referring to claim 8, Dureau discloses each of the products generates and sends back response replies to the one or more subscribers (p. 7, lines 6-24).

- 10. Referring to claim 9, Dureau discloses including a plurality of subscriber networks, each of the subscriber networks being operably connected to at least one communications message server, wherein the communication message server is operably linked to at least one collector (i.e. each set-top box includes a message server to transmit messages to the broadcast station) (Figure 1).
- 11. Referring to claim 10, Dureau discloses the server normalizes the interactive output received from its corresponding subscriber network for transmission to the at least one collector (the term "normalizes" is taken to mean "formatted in order for transmission") (p. 7, lines 1-5).
- 12. Claims 14-16, 18, 19, 24-30, 33-36, and 41 are rejected for similar reasons as stated above.

# Claim Rejections - 35 USC § 103

13. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 11-13, 20-23, 31, 32, 37, and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dureau in view of Hendricks et al. (USPN 6,160,989) (cited by Applicant in IDS) (hereinafter Hendricks).

- 14. Referring to claim 11, Dureau discloses the invention substantively as described in claim 1. Dureau does not specifically disclose the aggregator transmits the interactive output received from the collector to an application server operably connected to the aggregator. In analogous art, Hendricks discloses another collection and aggregation system wherein the aggregator (i.e. control receiver) transmits the interactive output received from the collector to an application server (i.e. network controller CPU 224) operably connected to the aggregator (col. 27, lines 1-5). It would be obvious to a person of ordinary skill in the art at the time the invention was made to combine the teaching of Hendricks with Dureau in order to effectively targeting advertisements to particular consumers and viewers without relying upon telephone lines as supported by Hendricks (col. 2, lines 55-63).
- 15. Referring to claim 12, Dureau discloses the invention substantively as described in claim 1. Dureau does not disclose the application server connected to a producer event browser via a web server. In analogous art, Hendricks discloses another collection and aggregation system wherein the application server connected to a producer event browser (i.e. a workstation) via a web server (i.e. network controller CPU) (col. 29, lines 4-10). It would be obvious to a person of ordinary skill in the art at

Application/Control Number: 09/825,409 Page 6

Art Unit: 2143

the time the invention was made to combine the teaching of Hendricks with Dureau in order to effectively targeting advertisements to particular consumers and viewers without relying upon telephone lines as supported by Hendricks (col. 2, lines 55-63).

- 16. Referring to claim 13, Dureau discloses the invention substantively as described in claim 1. Dureau does not disclose the application server is operably connected to a developer computer via a web server. In analogous art, Hendricks discloses another collection and aggregation system wherein the application server is operably connected to a developer computer via a web server (col. 34, lines 15-54). It would be obvious to a person of ordinary skill in the art at the time the invention was made to combine the teaching of Hendricks with Dureau in order to effectively targeting advertisements to particular consumers and viewers without relying upon telephone lines as supported by Hendricks (col. 2, lines 55-63).
- 17. Claims 20-23, 31, 32, 37, and 38 are rejected for similar reasons as stated above.

Claims 3, 17, 40 and 42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dureau in view of Gai et al. (USPN 6,714,985) (hereinafter Gai.

18. Referring to claim 3, Dureau discloses a collection and aggregation system substantively as described in claim 1. Dureau does not specifically disclose that the

Art Unit: 2143

network can handle at least 100,000 responses per second. In analogous art, Gai discloses another network wherein the apparatus may handle millions of messages per second (col. 13, lines 20-29). It would be obvious to a person of ordinary skill in the art at the time the invention was made to combine the teaching of Gai with Dureau in order to process messages at extremely high speeds, thereby increasing throughput and thereby allowing more users accessing the network as supported by Gai (col. 3, lines 52-56; col. 4, 26-42).

19. Claims 17, 40, and 42 are rejected for similar reasons as stated above.

## Response to Arguments

- 20. Applicant's arguments filed March 31, 2005 have been fully considered but they are not persuasive.
- 21. Applicant argues, in substance, that (1) Dureau does not disclose the response requests are collected or stored in a non-relational manner, (2) Dureau does not disclose normalizing response requests, nor does not disclose a collector connected to a communication message server, (3) Dureau does not disclose the data is not sent from the set-top box to the broadcast station in real time.
- 22. As to point (1) Applicant has not defined the term "non-relational manner" nor does not argue any further limiting definition of the term, and therefore intends its

Application/Control Number: 09/825,409

Art Unit: 2143

maintained.

broadest interpretation, and as such will be interpreted broadly by the Office. It can be known in the art that a non-relational manner of storing data is not requiring the synchronizing when the data is collected (i.e. related data fields of different tables are not updated as soon as the data is received). By this definition, the collector of Dureau satisfies the limitation "in a non-relational manner" since the set-top box collects data in a table as the transactions occur (p. 6, lines 20-30). BY this rationale the rejection is

Page 8

- As to point (2) Applicant's attention is turned to ¶ 11 of the previous office action stating that the term "normalizes" is taken to mean "formatted in order for transmission", which is supported by Dureau at page 7, lines 1-5. Furthermore since the set-top box of Dureau automatically formats the data in order to be sent to the broadcast stations, it inherently includes the communications message server. By this rationale the rejection is maintained.
- 24. As to point (3) Applicant is not understanding that since the claim merely states that the data is transmitted "through the system in real time" it does not necessarily mean that the data is transmitted through the *entire* system in real time. The set-top box receives data in real time (as explained in the previous Office Action ¶ 5) from the user as it occurs, which is transmitted through the system in real-time. By this rationale, the rejection is maintained.

### Conclusion

25. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph E. Avellino whose telephone number is (571) 272-3905. The examiner can normally be reached on Monday-Friday 7:00-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David A. Wiley can be reached on (571) 272-3923. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
